To whom it may concern,

I am the North-West Genomic Laboratory Hub (NWGLH) Lead for Bioinformatics and the Interim Lead for Informatics. Within my teams, the VariantValidator suite of tools (<https://variantvalidator.org/>) has been integrated into our clinical diagnostic processes.

The software is a valuable resource for ensuring variants analysed by our Genomic Scientists are recorded accurately in a standardized format, in a timely manner. This in turn supports the laboratory to store, share and mine variant data to provide insights into our patient cohorts.

I would be pleased to know that this resource has ongoing funding to help support our diagnostic workflows.

With kind regards

J Taylor
